

1. On your Windows laptop or PC, open 'System Information' and take a screenshot showing your OS version, processor, and RAM details.

The screenshot shows the Windows System Information window. The 'System Summary' tab is selected. A red box highlights the following details:

Item	Value
OS Name	Microsoft Windows 11 Home Single Language
Version	10.0.22631 Build 22631
Other OS Description	Not Available
OS Manufacturer	Microsoft Corporation
System Name	DESKTOP-7G3Q8MP
System Manufacturer	HP
System Model	HP Laptop 15s-fq2xxx
System Type	x64-based PC
System SKU	3C6Q3PA#ACJ
Processor	11th Gen Intel(R) Core(TM) i3-1115G4 @ 3.00GHz, 2995 Mhz, 2 Core(s), 4 Logical Processor(s)
BIOS Version/Date	Insyde F.23, 14-07-2021
Installed Physical Memory (RAM)	8.00 GB
Total Physical Memory	7.70 GB
Available Physical Memory	2.59 GB
Total Virtual Memory	9.45 GB
Available Virtual Memory	3.08 GB
Page File Space	1.75 GB
Page File	C:\pagefile.sys
Kernel DMA Protection	Off
Virtualization-based security	Running
Virtualization-based security Security Propert...	Base Virtualization Support, Secure Boot, DMA Protection, UEFI Code Readonly
Virtualization-based security Available Secu...	Base Virtualization Support, Secure Boot, DMA Protection, UEFI Code Readonly
Virtualization-based security Services Config...	Hypervisor enforced Code Integrity
Virtualization-based security Services Runni...	Hypervisor enforced Code Integrity
Device Encryption Support	Elevation Required to View
A hypervisor has been detected. Features required for Hyper-V will not be displayed.	

Below the table, there is a search bar labeled 'Find what:' and two checkboxes: 'Search selected category only' and 'Search category names only'. The 'Find' and 'Close Find' buttons are also visible.

The Windows taskbar at the bottom shows the date and time as 11:32 AM on 13-08-2024, along with system icons for network, volume, and battery.

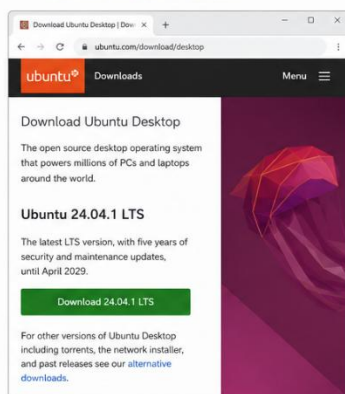

2.Download any official Linux distribution ISO (like Ubuntu or Fedora), and use Rufus or BalenaEtcher to create a bootable USB drive for installation.

Hint: If you don't have a spare USB, use a virtual machine tool like VirtualBox to mount the ISO and start the installation process virtually.

Download Ubuntu ISO and Create Bootable USB

1 Download Ubuntu ISO

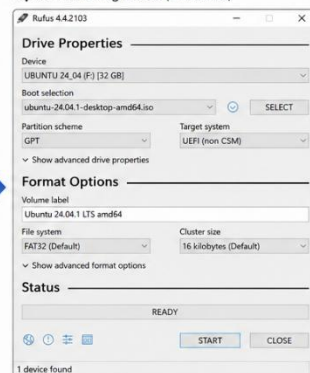

Go to the official Ubuntu website and download the latest LTS version.

✓ Example file:
ubuntu-24.04.1-desktop-amd64.iso

2 Create Bootable USB (Use Rufus or BalenaEtcher)

Option A: Using Rufus (Windows)

1. Insert your USB drive (min. 8 GB).
2. Select the downloaded .iso file.
3. Keep default settings.
4. Click START and wait for completion.

Option B: Using BalenaEtcher (Windows / macOS / Linux)

1. Open BalenaEtcher.
2. Click "Flash from file" and select the .iso file.
3. Select your USB drive.
4. Click "Flash!" and wait for completion.

3 Boot from USB and Install Ubuntu

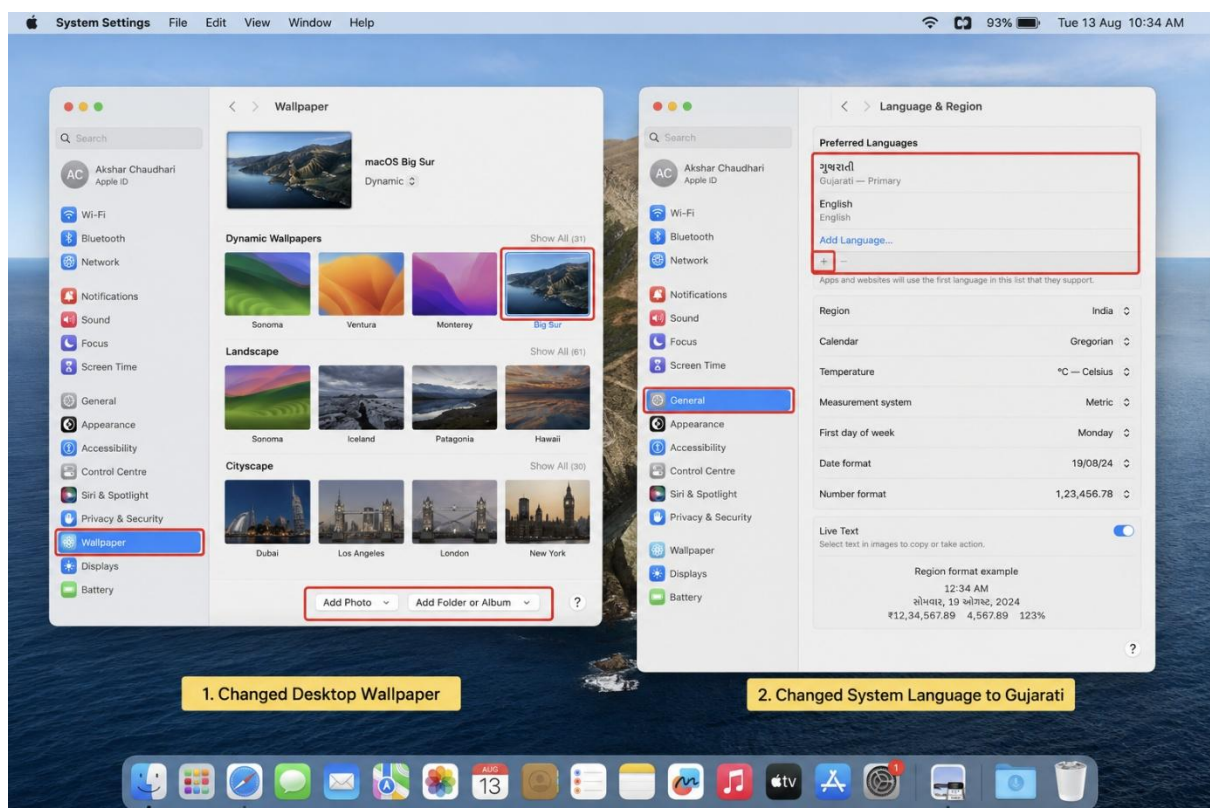

- Insert the bootable USB into the target computer.
- Restart the computer and boot from the USB drive (change boot order in BIOS/UEFI if needed).
- Follow the on-screen instructions to install Ubuntu.

✓ Done!

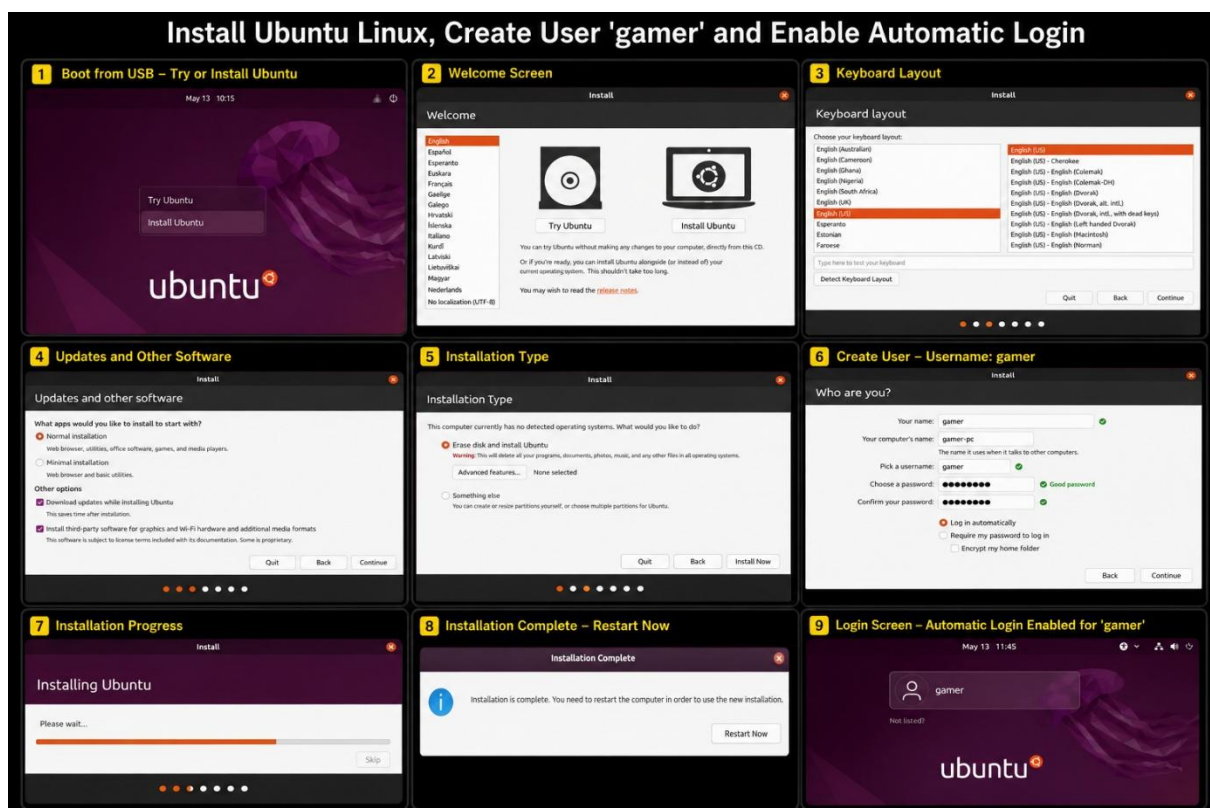

You have created a bootable Ubuntu USB ready for installation.

3. On a macOS device (or using a macOS virtual machine), open 'System Preferences' and change the desktop wallpaper, then adjust the system language to Hindi or Gujarati.

Hint: Find 'Language & Region' in System Preferences to add or change languages.

4. Install a fresh copy of Ubuntu Linux (real or virtual machine) and create a new user account named 'gamer'. After installation, enable automatic login for this user and take a screenshot of the login screen showing the username.

5. Use ChatGPT to generate a step-by-step guide for installing Windows 10 on a laptop, including partitioning tips and post-installation settings for privacy and updates. Follow the guide and note any steps that were unclear or missing.

1. Backup your files

- Save your photos, documents, and other important files to a USB drive or cloud.

2. Make a Windows 10 USB

- Use another computer to create a bootable Windows 10 USB.
- Use a USB drive of at least **8 GB**.

3. Start the laptop from the USB

- Insert the USB.
- Restart the laptop.
- Press the boot-menu key, such as **F12, F9, Esc**, depending on the laptop.
- Select the USB drive.

4. Start Windows Setup

- Choose your language and keyboard.

- Click **Install now**.
- Enter your product key, or choose **I don't have a product key**.

5. Choose Windows edition

- Select **Windows 10 Home** or **Pro**, matching your license.

6. Choose installation type

- Select **Custom: Install Windows only**.

7. Partition the disk

- Be careful—deleting partitions can erase files.
- For a completely clean installation, select the correct old Windows partitions and delete them.
- Select **Unallocated Space** and click **Next**.
- Windows will create the required partitions automatically.
- **Do not delete a recovery partition unless you know you don't need it.**

8. Wait for installation

- Windows will copy files and restart several times.
- Follow the instructions on the screen.

9. Set up Windows

- Choose your country and keyboard.
- Connect to Wi-Fi.
- Create or sign in to your account.

10. Check privacy settings

- Open **Settings** → **Privacy**.
- Turn off permissions you don't want, such as unnecessary location, camera, or microphone access.
- Review diagnostic-data settings during setup.

11. **Install updates**

- Go to **Settings** → **Update & Security** → **Windows Update**.
- Click **Check for updates**.
- Install available updates and drivers.

12. **Check everything**

- Make sure Wi-Fi, sound, Bluetooth, touchpad, camera, and display are working.

Steps that may be unclear

- The **boot-menu key** is different for each laptop.
- Partition names and sizes are different on every laptop.
- Product-key activation depends on your Windows license.
- Some laptop drivers may need to be downloaded from the laptop manufacturer's website.
- **Important:** Windows 10 support ended on **October 14, 2025**, so in 2026 Windows 11 is normally a better choice for a new installation if the laptop supports it.
