

1.Create a table listing 3 types of printers, 2 types of scanners, and 2 types of webcams, and for each, write one real-life use case (for example: 'Inkjet printer – printing college assignments').

Category	Device Type	Real-Life Use Case
Printer	Inkjet Printer	Printing high-quality family photo albums at home
Printer	Laser Printer	Mass-printing multi-page invoices and contracts in a busy office
Printer	3D Printer	Prototyping plastic replacement parts for household appliances
Scanner	Flatbed Scanner	Digitizing fragile historical family documents and bound book pages
Scanner	Sheet-fed Scanner	Rapidly scanning large stacks of double-sided tax forms into PDFs
Webcam	Built-in Laptop Webcam	Attending weekly casual remote work team check-ins
Webcam	High-Definition External 4K Webcam	Live streaming video game commentary or recording professional online courses

2. Draw a labeled diagram showing how a typical home printer connects to a laptop or PC, including the connection interface used (USB, Wi-Fi, or Bluetooth)

LABELLED DIAGRAM: HOME PRINTER TO COMPUTER CONNECTION METHODS

3. List three different connection interfaces (such as USB, Wi-Fi, Bluetooth) used by peripherals like printers, scanners, and webcams, and for each, name one advantage and one disadvantage. **Hint:** Think about speed, convenience, and compatibility.

	Advantage	Disadvantage
USB (Wired)	High Reliability & Plug-and-Play Compatibility: Delivers maximum stability with near-zero latency or signal dropouts, requiring minimal setup across almost all computers.	Physical Distance & Cable Clutter: Keeps peripherals tethered to a specific location (typically within 1–3 meters) and increases cable clutter around the workstation.
Wi-Fi (Wireless Network)	Multi-Device Accessibility: Allows multiple laptops, PCs, smartphones, and tablets on the same network to share a single peripheral without physical connection.	Complex Setup & Network Vulnerability: Setup requires network configuration, and bandwidth congestion or Wi-Fi dropouts can disrupt print or scan jobs.
Bluetooth (Wireless Direct)	Convenient Direct Pairing: Connects devices directly without requiring an intermediary router or local network, making it ideal for mobile/portable setups.	Slower Data Transfer Rates: Lower bandwidth makes it inefficient for heavy tasks, such as transmitting high-resolution scans or high-bitrate video streams.

4. Pick any one device you use at home or college (printer, scanner, or webcam). Write step-by-step instructions for how you would connect it to your computer, including what cable or wireless method you would use and any setup steps required.

Connecting a Wireless Printer via Wi-Fi

Step 1: Connect the Printer to Your Wi-Fi Network

1. Power on the printer and locate the printer's digital display or control panel.
 2. Open the Wi-Fi / Setup Menu on the printer.
 3. Select Wireless Setup Wizard (or search for local Wi-Fi networks).
 4. Choose your home/college Wi-Fi network name (SSID) from the list.
 5. Enter your Wi-Fi password using the printer's screen or buttons, then press OK/Connect.
- **Confirmation:** The Wi-Fi indicator light on the printer should stop flashing and turn solid blue or green once connected.

Step 2: Connect Your Computer to the Same Wi-Fi Network

1. On your laptop or PC, open your Wi-Fi settings.
2. Make sure your computer is connected to the exact same Wi-Fi network as the printer. *(Note: If your router uses both 2.4 GHz and 5 GHz bands, ensure both devices are on the same band).*

Step 3: Add the Printer to Your Computer

- For Windows:
 1. Go to Settings > Bluetooth & devices > Printers & scanners.

2. Click Add device.
 3. Wait for your computer to search the network, find your printer name, and click Add device.
- For macOS:
 1. Go to System Settings > Printers & Scanners.
 2. Click Add Printer, Scanner, or Fax...
 3. Select your printer from the list and click Add.

Step 4: Install Drivers & Test

1. The operating system will automatically download basic drivers in most cases. If prompted, download the manufacturer's software app (e.g., HP Smart, Canon PRINT, or Epson Connect) to enable advanced scanning/ink management tools.
2. Open any document (or word processor), press Ctrl + P, select your new printer, and print a Test Page to verify the connection.
